India

SUMMARY

Passionate full-stack developer and MCA student specializing in AI & ML at Amity University Online. Builds real-time, interactive web applications — from Kafka-powered location trackers to collaborative polling platforms — with all projects deployed and accessible online. Currently expanding into mobile development while deepening knowledge of distributed systems and modern web architecture. Actively seeking internships, freelance work, and entry-level full-time opportunities.

TECHNICAL SKILLS

Frontend	React, TypeScript, Tailwind CSS, Framer Motion, Vite
Backend	Node.js, Apache Kafka, WebSockets, REST APIs
Languages	JavaScript, TypeScript, Python
AI / ML	Python, NumPy, core ML algorithms, model integration
Tools	Git, GitHub, Vercel, Docker (learning)
Exploring	React Native, Flutter (mobile development)

PROJECTS

Pulseboard — Live Polling & Feedback Platform

React · Node.js · WebSockets | pulse-board-live-poll-for-feedback.vercel.app | github.com/Akashkr28/pulseboard

- Real-time collaborative polling with instant vote-count updates pushed to all connected clients simultaneously.
- Designed minimal, responsive UI enabling quick session creation and live result visualization.

1 Million Checkboxes — Collaborative Real-time App

React · Node.js · WebSockets | million-checkboxes-xtg8.onrender.com | github.com/Akashkr28/million-checkboxes

- Synchronized shared checkbox state across all concurrent users in real-time via WebSocket broadcast.
- Optimized rendering pipeline to handle 1,000,000 DOM elements with consistent UI performance.

Real-time Location Tracker — Kafka-powered GPS System

React · Apache Kafka · Node.js · Leaflet.js

- Streamed live GPS coordinates through Kafka topics for high-throughput, fault-tolerant event delivery.
- Rendered real-time map updates with sub-second latency using Leaflet.js on the consumer side.

AI Chat Application — Intelligent Conversational Interface

React · Python · REST APIs

- Integrated an AI language model API to power context-aware, multi-turn conversational responses.
- Built clean React frontend with streaming message display and persistent conversation history.

EDUCATION

Master of Computer Applications (MCA) — AI & ML Specialization

Amity University Online · 2023 – Present · 3rd Semester (Current)

- Core coursework: Machine Learning, Data Structures, Distributed Systems, Python for AI.
- Applied academics by building and deploying production-grade real-time projects throughout the programme.

ADDITIONAL

Interests: Open-source development, real-time systems architecture, generative AI, mobile-first UX. **Languages:** English (professional), Hindi (native). **Availability:** Immediately available for internships, freelance projects, and entry-level full-time roles.
